Microsoft Edge & Internet Explorer Compatibility with PierPASS website

Due to compatibility issues, the internal pages of the PierPASS TMF site (www.pierpass-tmf.org) cannot viewed on Microsoft Edge, Chrome, Safari, and other newer browsers. The following describes how users of Edge and Internet Explorer 11/10 can properly load and use the TMF site.

The TMF site is best viewed with Internet Explorer 11 or 10 (with compatibility view turned on) or Mozilla Firefox browsers.

Microsoft Edge

In order to view the site and use all its functionality, users of Edge will need to view the site through Internet Explorer as follows:

1. Locate the “Settings & More” menu on the upper right hand side of the toolbar (the three dots)

2. From the dropdown select “Open with Internet Explorer”. Once selected Internet Explorer 11 should open on your desktop.

3. For proper usage of Internet Explorer 11, follow the following settings for that browser.
Internet Explorer 11 & 10

In order to view the site and use all its functionality, users of IE 11 & 10 will need to enable Compatibility View.

1. Locate the “Tools” drop down from the upper right side of the toolbar (the “gear wheel”)

2. From the “Tools” menu, select “Compatibility View settings”

3. The Compatibility View box should appear with the TMF site address in the “Add this website” box. Click “Add” & the site address will move to the “Websites you’ve added to Compatibility View” box. Click “Close”. The browser page should refresh and user should be able to view all portions of the TMF site.

Please note that occasional Microsoft updates to Windows may remove any sites that have been setup for Compatibility View. Users will need to follow these steps again when that occurs.
